Lille pentest introduktion

# Paranoia defined

par·a·noi·a
/ˌparəˈnoiə/ 🔊

noun
noun: **paranoia**

1. a mental condition characterized by delusions of persecution, unwarranted jealousy, or exaggerated self-importance, typically elaborated into an organized system. It may be an aspect of chronic personality disorder, of drug abuse, or of a serious condition such as schizophrenia in which the person loses touch with reality.
   synonyms: persecution complex, delusions, obsession, psychosis More

 - suspicion and mistrust of people or their actions without evidence or justification.
   "the global paranoia about hackers and viruses"

Origin

GREEK

para
irregular

GREEK   MODERN LATIN

paranoos ───────────────→ paranoia
distracted   *early 19th cent.*

GREEK

noos
mind

IT-sikkerhed

Vi ønsker at beskytte noget

Fortrolighed - data holdes hemmelige

Integritet - data ændres ikke uautoriseret

Tilgængelighed - data og systemet er tilgeængelig når de skal bruges

What is data?

Personal data you dont want to loose:

- Wedding pictures
- Pictures of your children
- Sextapes
- Personal finances

Source: picture of my son less than 24 hours old - precious!

The current situation

Internet security sucks, laptops suck at security

Mobile devices suck even more at security - less CPU/MEM/storage

We depend on cloud services and underfunded infrastructure - OpenSSL

We depend on others and the whole internet - DDoS

New vulnerabilities, while we are already dealing with those from yesterday

Heartbleed CVE-2014-0160

The Heartbleed Bug

The Heartbleed Bug is a serious vulnerability in the popular OpenSSL cryptographic software library. This weakness allows stealing the information protected, under normal conditions, by the SSL/TLS encryption used to secure the Internet. SSL/TLS provides communication security and privacy over the Internet for applications such as web, email, instant messaging (IM) and some virtual private networks (VPNs).

The Heartbleed bug allows anyone on the Internet to read the memory of the systems protected by the vulnerable versions of the OpenSSL software. This compromises the secret keys used to identify the service providers and to encrypt the traffic, the names and passwords of the users and the actual content. This allows attackers to eavesdrop on communications, steal data directly from the services and users and to impersonate services and users.

Source: http://heartbleed.com/

```

- Obtained using Heartbleed proof of concepts - Gave full credit card details

- "can XXX be exploited- yes, clearly! PoCs ARE needed
  without PoCs even Akamai wouldn't have repaired completely!

- The internet was ALMOST fooled into thinking getting private keys from Heartbleed was not possible - scary indeed.

Exploits og sårbarheder

Exploits som Heartbleed udnytter sårbarheder

Kræver nogle forudsætninger

Sårbarheder i software

Sårbarheder pga dårlige indstillinger

Dårlige passwords

Clients

Vores client systemer er idag oftest:

Laptops

Mobile enheder

Delte stationære

Malware charateristics

Malware is advanced and sophisticated

Modular frameworks

Use strong cryptography to hide, and hide your data ransomware

Use 0-day exploits - unknown to others

Use rootkits to stay under radar and avoid anti-virus

Mutate and change to avoid detection

In general less noisy

Botnets and malware sold with support

**Todays offer
trojans**

Buy 2 pay for one

Fresh botnets

Fresh phish
infected within the last
week

Support agreement

trojan support
email, IRC, IM
Pay using credit card

Malware programmers act like software houses

"Buy this version with updates and support"

Rent a bot net with 100.000 computers

Do you recognize Phishing?

2018 Henrik Lund Kramshøj

Client sikkerhed - Back to basics
opbevaring af sikkerhedskopi væk fra systemer

Opdateringer er altid nødvendige, vi skal opfordre til opdateringer

Firewall aktiveret altid

Phishing og exploits via email - spearphishing er stor risiko

Procedurer og rapportering, gør det nemt

Backups gør at vi kan opdatere uden risiko, genskabe data

PS Måske bruges en cloud service istedet for bånd, men offline er godt

Risk management defined

Information Risk Management

Life is full of risk.

Risk is the possibility of damage happening and the ramifications of such damage should it occur. *Information risk management (IRM)* is the *process* of identifying and assessing risk, reducing it to an acceptable level, and implementing the right mechanisms to maintain that level. There is no such thing as a 100 percent secure environment. Every environment has vulnerabilities and threats to a certain degree. The skill is in identifying these threats, assessing the probability of them actually occurring and the damage they could cause, and then taking the right steps to reduce the overall level of risk in the environment to what the organization identifies as acceptable.

Source: Shon Harris *CISSP All-in-One Exam Guide*

We all take risks every day - sometimes even calculated risk

Server sikkerhed

Vi mener servere, og tilhørende infrastruktur

Servere - server OS og applikationer

KVM: IPMI, Dell DRAC, HP ILO, adskilte management netværk

Netværksenheder brug VPN til at tilgå alle administrative interfaces

Firewalls - naturligvis, men flere zoner, DMZ

Solutions

Automate your job, Ansible is our preferred tool

Backup your life, help others backup, Duplicity is my choice

Use hackertools to detect and identify

Categorise, sort, prioritize, group problems - solve more

Measure, collect and present - make it pretty

Learn from devops, Elasticsearch Logstash Kibana, Grafana

`http://ssd.eff.org` Learn self-defense for yourself, practice infosec war

Daily operations

Asset ownership Routers, servers, network devices, services

User management Lots of things, including Active Directory

Patch management

Host and services ownership, who owns the services

Monthly and quarterly checks

Crypto stuff HTTPS certificates, TLS in general, use 4k keys,
TLS 1.2+, `https://www.ssllabs.com/`

VPN settings: IPsec, VPN, L2TP, key lengths, roll shared PSK

Routing, internet service provider contacts, whois

Firewall review - read all rules, disable unneeded

Review DNS and mail settings, DMARC, DNSSEC, DKIM

# Use standard to take Charge of Your Security

Multiple standards:

- ISO/IEC 27001 - information security management system standards
  `http://en.wikipedia.org/wiki/ISO/IEC_27001`

- SSAE 16 No. 16, Reporting on Controls at a Service Organization
  Statement on Standards for Attestation Engagements (SSAE) `http://ssae16.com/`

- ISAE 3402 Assurance Reports on Controls at a Service Organization
  International Standard on Assurance Engagements (ISAE) `http://isae3402.com/`

- Independent assessment from a trusted security firm - which must often also be certified

- Physical Security, power, HVAC - trusted partners reviewing security

- Implementing standards is also security

Over the years organisations have become more mature with regards to security

Implementing security controls were easier when you owned all resources

Balanced security

good security

Security level

Prod   Test Dev Mail Web

bad security

Prod   Test Dev Mail Web
Better to have the same level of security

If you have bad security in some part - guess where attackers will end up

Hackers are not required to take the hardest path into the network

Realize there is no such thing as 100% security

Defense in depth - layered security

```
┌─────────────────────────────────┐
│  ┌───────────────────────────┐  │
│  │  ┌─────────────────────┐  │  │
│  │  │    ┌──────────┐     │  │  │
│  │  │    │   root   │     │  │  │
│  │  │    └──────────┘     │  │  │
│  │  │    root access      │  │  │
│  │  │    requires group   │  │  │
│  │  │    wheel            │  │  │
│  │  └─────────────────────┘  │  │
│  │    SUDO requires          │  │
│  │    password               │  │
│  └───────────────────────────┘  │
│    SSHD                         │
│    requires keys                │
└─────────────────────────────────┘
  firewall only allows
  SSH from specific IPs
```

Multiple layers of security! Isolation!

First advice use the modern operating systems

Newer versions of Microsoft Windows, Mac OS X and Linux

- Buffer overflow protection
- Stack protection, non-executable stack
- Heap protection, non-executable heap
- *Randomization of parameters* stack gap m.v.

Note: these still have errors and bugs, but are better than older versions

Always try to make life worse and more costly for attackers

Network tools - examples

Net: Bro `http://www.bro-ids.org` Suricata `http://suricata-ids.org`

DNS: DSC and PacketQ `https://github.com/dotse/packetq/wiki`
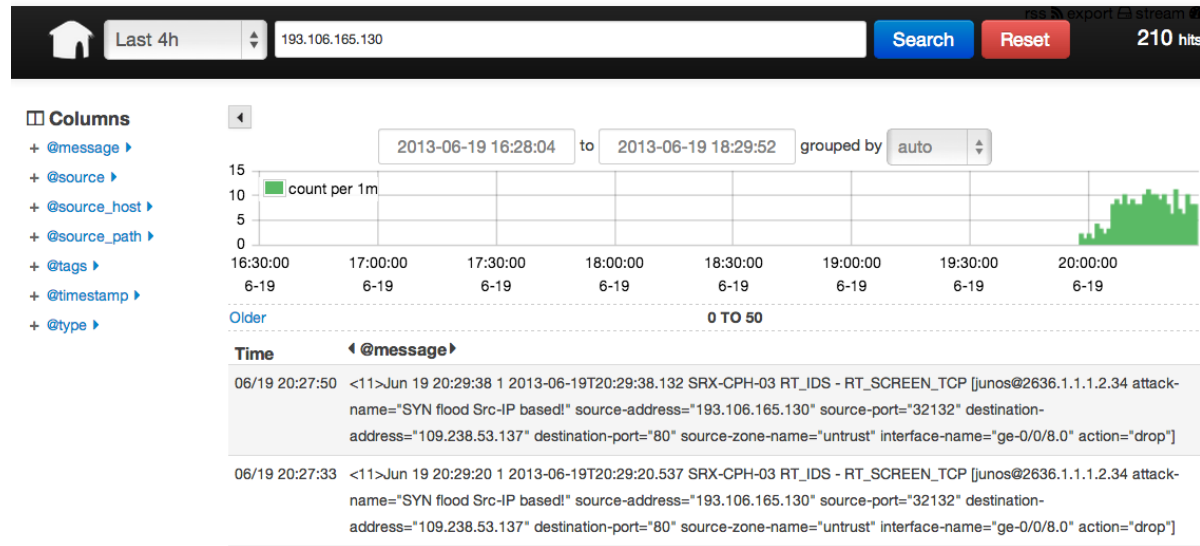

Syslog: Elasticsearch, Logstash, and Kibana, called ELK stack or Elastic stack

Packetbeat `https://www.elastic.co/products/beats/packetbeat`

Collect and present data more easily - non-programmers

Security engineering som job rolle

On any given day, you may be challenged to:

Create new ways to solve existing production security issues
Configure and install firewalls and intrusion detection systems
Perform vulnerability testing, risk analyses and security assessments
Develop automation scripts to handle and track incidents
Investigate intrusion incidents, conduct forensic investigations and incident responses
Collaborate with colleagues on authentication, authorization and encryption solutions
Evaluate new technologies and processes that enhance security capabilities
Test security solutions using industry standard analysis criteria
Deliver technical reports and formal papers on test findings
Respond to information security issues during each stage of a project's lifecycle
Supervise changes in software, hardware, facilities, telecommunications and user needs
Define, implement and maintain corporate security policies
Analyze and advise on new security technologies and program conformance
Recommend modifications in legal, technical and regulatory areas that affect IT security

Pentesting as example

Penetration testing

Kontrol af sikkerheden

Bruger aktive værktøjer

Brug Nmap pakken til at checke åbne porte

Trinity breaking in

http://nmap.org/movies.html
Meget realistisk https://www.youtube.com/watch?v=0PxTAn4g20U

Hackertools are for everyone!

- Hackers work all the time to break stuff, Use hackertools:

- Nmap, Nping `http://nmap.org`

- Wireshark - `http://www.wireshark.org/`

- Aircrack-ng `http://www.aircrack-ng.org/`

- Metasploit Framework `http://www.metasploit.com/`

- Burpsuite `http://portswigger.net/burp/`

- Skipfish `http://code.google.com/p/skipfish/`

- Kali Linux `http://www.kali.org`

Most popular hacker tools `http://sectools.org/`

Nping - ligesom ping, blot med flere protokoller

```
root@KaliVM:~# nping --tcp -p 80 www.zencurity.com

Starting Nping 0.7.70 ( https://nmap.org/nping ) at 2018-09-07 19:06 CEST

Byg pakkerne med kommandolinien

Nmap GUI - Zenmap

Nmap ("Network Mapper") is a free and open source (license) utility for network discovery and security auditing.

Today a package of programs for Windows, Mac, BSD, Linux, ... source

Aktiv testing What happens now?

Think like a hacker

Recon phase – gather information reconnaissance

- Traceroute, Whois, DNS lookups
- Ping sweep, port scan
- OS detection – TCP/IP and banner grabbing
- Service scan – rpcinfo, netbios, ...
- telnet/netcat interact with services

Kali Linux the pentest toolbox

Kali `http://www.kali.org/`

100.000s of videos on youtube alone, searching for kali and $TOOL

Also versions for Raspberry Pi, mobile and other small computers

Nmap port sweep efter webservere

```
root@cornerstone:~#  nmap -p80,443 172.29.0.0/24

Starting Nmap 6.47 ( http://nmap.org ) at 2015-02-05 07:31 CET
Nmap scan report for 172.29.0.1
Host is up (0.00016s latency).
PORT     STATE      SERVICE
80/tcp   open       http
443/tcp filtered https
MAC Address: 00:50:56:C0:00:08 (VMware)

Nmap scan report for 172.29.0.138
Host is up (0.00012s latency).
PORT     STATE   SERVICE
80/tcp   open    http
443/tcp closed https
MAC Address: 00:0C:29:46:22:FB (VMware)
```

Scan for Heartbleed and SSLv2/SSLv3

Example Usage

```
nmap -sV -sC <target>
```

Script Output

```
443/tcp open    https    syn-ack
| sslv2:
|   SSLv2 supported
|   ciphers:
|     SSL2_DES_192_EDE3_CBC_WITH_MD5
|     SSL2_IDEA_128_CBC_WITH_MD5
|     SSL2_RC2_CBC_128_CBC_WITH_MD5
|     SSL2_RC4_128_WITH_MD5
|     SSL2_DES_64_CBC_WITH_MD5
|     SSL2_RC2_CBC_128_CBC_WITH_MD5
|_    SSL2_RC4_128_EXPORT40_WITH_MD5
```

```
nmap -p 443 --script ssl-heartbleed <target>
https://nmap.org/nsedoc/scripts/ssl-heartbleed.html

masscan 0.0.0.0/0 -p0-65535  --heartbleed
https://github.com/robertdavidgraham/masscan
```
